ANJAN DEB PRIMARY EXAMINER				

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

Claim 6, on lines 3-4 the following will be deleted ", and wherein the step of measuring the reference sample voltage comprises terminating the exposure of the one or more environmental parameters to the isolated chamber"

Authorization for this examiner's amendment was given in a telephone interview with Ann Marie Mewherter on February 7, 2005.

Reasons for Allowance

The following is an examiner's statement of reasons for allowance:

The prior art does not teach or render obvious where determining a work function correction factor is accomplished by removing the reference sample from a controlled environment, then measuring a voltage of the reference sample with a non-contact voltage sensor, and after measurement returning the sample to the controlled environment in the combination as claimed.

The most pertinent prior art is as follows:

Hansen (5136247) teaches a method for calibrated work function measurements, that' takes a test measurement that is reflective of the work function of the sample,

wherein the environment is a gas environment also teaches another embodiment wherein all measurement is done inside of a chamber (controlled environment).

Hansen lacks teaching wherein a sample is removed from a controlled environment, measurement is done, and the sample is then returned to the controlled environment.

Yoshitake et al. teaches determining the work function of a sample wherein the sample is cleaned by use of a gas, and kept at different temperatures inside of a vacuum before measuring work function. Yoshitake et al. also lacks the teaching of removing a sample from a controlled environment to take a measurement and then returning the sample to the controlled environment.

Danyluk et al. (6717413) teaches determining a work function of a sample and contains an ionization chamber to send out ionization particles, so that the probe senses a small amount of electrical current produced by the ions as they move toward the testing surfaces.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jeff Natalini whose telephone number is 571-272-2266. The examiner can normally be reached on M-F 8-5.

Application/Control Number: 10/606,066

Art Unit: 2858

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Eddie Lefkowitz can be reached on 571-272-2180. The fax phone number

for the organization where this application or proceeding is assigned is 703-872-9306.
